

Grand Valley Power Power Cost Adjustment (PCA)

Applicability:

Applicable to metered consumers receiving electric service from the Cooperative under the following tariffs:

- General Service (GS-TOU)
- Electric Vehicle (EV-TOU)
- Irrigation (I-TOU)
- Commercial and Small Power (CSP-D)
- Large Power (LP-D)
- Industrial (IND)
- Industrial Coincident Peak (IND-CP)
- Industrial Load Dependent Rate (IND-LDR)
- Sales for Resale (SR)
- Non-Metered Service (NMS)

Power Cost Adjustment:

The Power Cost Adjustment shall be computed and billed on a uniform per kWh basis each month to ensure that all wholesale power costs are passed through to consumers without mark-up. Because wholesale power costs are billed to the Cooperative by its wholesale power providers using estimates, the monthly Power Cost Adjustment is calculated using estimated power costs and estimated energy sales, and revenue recovery will require reconciliation over time.

Any Power Cost Adjustment revenue surpluses will be applied to reduce estimated power costs and deficits factored in to increase estimated power costs over a rolling twelve-month period.
